Latest Version: 7.0

Question: 1

An administrator expects channel accounting data but none is being produced. Which setting should be checked first according to IBM troubleshooting guidance?

Response:

- A. Whether CHLAUTH is disabled
- B. Whether STATCHL is set appropriately at queue-manager or channel level
- C. Whether the dead-letter queue is defined
- D. Whether the CONNAUTH attribute references an LDAP object

Answer: B

Question: 2

Which statements are correct about determining which IBM MQ linear log files are still required? (Select two.)

- A. DISPLAY QMSTATUS can return details about the required log files
- B. Logger event messages can identify which log files are still needed for restart or media recovery
- C. File modification timestamps are the recommended method for determining log-file sequence
- D. All inactive linear log files can always be deleted immediately

Answer: A,B

Question: 3

Which statement is correct about authority events in IBM MQ?

- A. They are generated only for successful object deletions
- B. They are unrelated to security operations
- C. They can be controlled through queue-manager event settings and are relevant to unauthorized access monitoring
- D. They are available only on the MQ Console dashboard

Answer: C

Question: 4

A SVRCONN channel is blocked before it starts. Which IBM MQ security mechanism should be checked first?

- A. Channel status displays (CHSTATUS)
- B. Object authority records (SETMQAUT)
- C. Connection authentication (CONNAUTH)
- D. Channel authentication rules (CHLAUTH)

Answer: D

Question: 5

Which statement is correct about IBM MQ 9.4 maintenance streams?

- A. IBM MQ 9.4 is only available as a Continuous Delivery release
- B. IBM MQ 9.4 includes both Long Term Support and Continuous Delivery maintenance streams
- C. Fix packs are available only for z/OS
- D. IBM MQ 9.4 no longer receives maintenance after general availability

Answer: B

Question: 6

Which statements are correct about IBM MQ connectivity technologies in 9.4?
(Select two.)

- A. IBM MQ supports AMQP-related channel capabilities
- B. IBM MQ 9.4 added no new REST-related messaging capabilities
- C. IBM MQ supports JMS- and XMS-based application connectivity
- D. IBM MQ supports only MQI and rejects all higher-level APIs

Answer: A,C

Question: 7

Which troubleshooting statement is most accurate for IBM MQ Console and REST API issues in a containerized environment?

- A. IBM will fully debug the customer's container platform and deployment pipeline before reviewing MQ evidence
- B. Initial diagnosis should focus on available logs and, if needed, trace, while IBM support for prebuilt images remains limited to IBM MQ and IBM-supplied container enablement code
- C. Console and REST problems are unrelated to standard IBM MQ troubleshooting practices
- D. The only supported recovery step is to redeploy the cluster with a different CPU architecture

Answer: B

Question: 8

Which design choice is most appropriate when the requirement is to improve client workload distribution across several equivalent queue managers rather than protect a single queue manager instance?

- A. Native HA
- B. RDQM disaster recovery
- C. Uniform cluster
- D. Linear logging

Answer: C

Question: 9

A security architect is configuring an MQTT-based telemetry channel and wants TLS-protected connections. Which statement is correct?

- A. Telemetry channels do not support TLS
- B. TLS telemetry channels require key files, and without the necessary TLS configuration the channel does not accept TLS connections
- C. MQTT TLS is configured only through setmqaut
- D. Telemetry TLS is supported only when MQIPT is disabled

Answer: B

Question: 10

Which queue-manager status attribute is most directly useful when checking how much of the primary log space is currently in use for restart recovery?

- A. LOGEXTSZ
- B. LOGINUSE

C. QMFSUSE
D. REUSESZ

Answer: B
