# Latest Version: 6.0

## Question: 1

Which component of IBM Cloud Pak for Integration provides a unified view for administration, monitoring, and development?

- A. API Connect
- B. Platform Navigator
- C. Operations Dashboard
- D. DataPower Gateway

**Answer: B**

Explanation:

The Platform Navigator is the single pane of glass that consolidates management tasks across all CP4I capabilities.

## Question: 2

In the CP4I multi-style integration approach, which style focuses on asynchronous, decoupled communication using topics and partitions?

- A. API
- B. Messaging
- C. Event streaming
- D. REST

**Answer: C**

Explanation:

Event streaming (Kafka-based) uses topics and partitions to enable asynchronous, loosely-coupled data flow.

## Question: 3

Which OpenShift component is responsible for routing external HTTP(S) traffic to services inside the cluster?

- A. Ingress Controller
- B. Service Mesh
- C. Route
- D. Persistent Volume

**Answer: C**

Explanation:

OpenShift Routes expose services outside the cluster by configuring the internal router.

### Question: 4

When installing CP41 on an air-gapped OpenShift cluster, which of the following is a required step?

- A. Enable internet access for the Hub
- B. Pull container images from a public registry at runtime
- C. Load pre-downloaded images into an internal registry
- D. Use the default Red Hat Marketplace operator catalog

**Answer: C**

Explanation:

Air-gapped installations require pre-loading all required images into a private registry accessible by the cluster.

### Question: 5

Which licensing metric is primarily used to bill IBM Cloud Pak 6r Integration

- A. Number of APIs published
- B. Virtual Processor Cores (VPC)
- C. Number of MQ queue managers
- D. Amount of storage used (TB)

**Answer: B**

Explanation:

CP41 is licensed based on Virtual Processor Cores (VPC) or VPC equivalents.
