## Question: 1

During testing, an administrator notices that new sessions are not replicating between Managed Servers in a cluster. What is the most probable cause?

Response:

- A. Session replication was disabled in the Web application descriptor.
- B. The cluster messaging mode is set to multicast.
- C. Node Manager is not running on all machines.
- D. The Admin Server is stopped.

**Answer: A**

## Question: 2

What is the primary purpose of Managed Server Independence (MSI) mode?

- A. To allow a Managed Server to start with cached configuration when the Admin Server is unavailable
- B. To allow cluster failover between Admin Servers
- C. To replicate session data between servers
- D. To deploy applications across domains automatically

**Answer: A**

## Question: 3

Which three monitoring tasks can be performed from the Administration Console?  
Choose three.

- A. Viewing JDBC connection pool usage statistics
- B. Modifying domain configuration files directly
- C. Monitoring JMS destination metrics
- D. Tracking server health states

**Answer: A,C,D**

## Question: 4

Which two WLST commands can be used to retrieve information from an MBean?  
Choose two.

- A. get()
- B. ls()
- C. edit()
- D. invoke()

**Answer: A,B**

### Question: 5

After restarting a WebLogic cluster, messages sent before shutdown are missing. The JMS server was configured with a file store. What likely caused this issue?

- A. The file store directory was located on a non-persistent local drive
- B. The JDBC driver was misconfigured
- C. The connection factory JNDI name was changed
- D. Cluster messaging mode was unicast

**Answer: A**

### Question: 6

You are tasked with migrating a WebLogic domain from development to production. Which is the most appropriate method?

- A. Use pack to create a domain JAR and unpack it in the target environment.
- B. Copy the /autodeploy folder to the new machine.
- C. Use the Node Manager migrateServer command.
- D. Export all configurations manually using WLST.

**Answer: A**

### Question: 7

Which property determines how long a connection can remain idle before being reclaimed by WebLogic?

- A. InactiveConnectionTimeoutSeconds
- B. TestFrequencySeconds

- C. ConnectionReserveTimeoutSeconds
- D. MaxCapacity

**Answer: A**

### Question: 8

Which two security providers are typically used together to manage user access and role mapping?  
Choose two.

- A. Authorization Provider
- B. Role Mapping Provider
- C. Adjudication Provider
- D. Identity Assertion Provider

**Answer: A,B**

### Question: 9

You're analyzing a clustered domain where Managed Servers on different machines show communication timeouts. Which configuration is most likely responsible?

- A. Inconsistent listen addresses across Managed Servers
- B. Shared Node Manager log directory
- C. Single thread constraint for JMS service
- D. Missing Admin Server startup class

**Answer: A**

### Question: 10

Which statement correctly describes the function of an Authorization Provider in WebLogic Server?

- A. It maps users to groups.
- B. It defines policies that determine which authenticated users can access resources.
- C. It encrypts passwords for secure communication.
- D. It validates SSL certificates.

**Answer: B**
