## Question: 1

How many retries may a station attempt before a Cisco AP dumps the frame?

- A. 128
- B. 64
- C. 32
- D. 16

**Answer: B**

## Question: 2

What is illustrated by the following figure?

- A. Cisco PI Health
- B. DNA Center Global Network Health
- C. DNA Center Users Health
- D. Cisco PI default dashboard

**Answer: B**

## Question: 3

In wireless LAN networks, what is the companion mechanism to CSMA/CD in wired networks?

- A. Carrier Sense Media Access/Collision Avoidance
- B. Carrier Sense Multiple Access/Collision Avoidance
- C. Code Sense Multiple Access/Collision Avoidance
- D. None of these

**Answer: B**

#### **Question: 4**

Which one of the following applications would be the most appropriate use for an AP model that has internal antennas?

- A. A location where a relatively wide coverage area is desired
- B. A location where coverage is needed toward one side of the AP
- C. A location where a patch antenna's pattern is required
- D. A location where an omnidirectional antenna is not desirable

**Answer: A**

#### **Question: 5**

What is the maximum number of subordinate access points (APs) of the same model that can download the image from the primary AP?

- A. Two
- B. Three
- C. Four
- D. Five

**Answer: B**

#### **Question: 6**

Refer to the exhibit.

**Rogue Rule > Edit**

Rule Name: Rule 1

Type: Malicious

Match Operation:  Match All  Match Any

Enable:

**Conditions**

Minimum RSSI (-95 to -50): -65 dBm

Time Duration (0-3600): 3600 secs.

---

User configured SSID

Admin	Add SSID	Remove

Add Condition

Client Count Add Condition

An engineer tries to manage the rogues on the Cisco WLC. Based on the configuration, which AP is marked as malicious by the controller?

- A. rogue AP with SSID admin seen for 4000 seconds and heard at -70dBm
- B. rogue AP with SSID admin seen for 3000 seconds and heard at -60dBm
- C. rogue AP with SSID admin seen for 4000 seconds and heard at -60dBm
- D. rogue AP with SSID admin seen for 3000 seconds and heard at -70dBm

**Answer: D**

**Question: 7**

Device hardware identification, such as validating whether a device is an Apple iOS device or a Samsung Galaxy device, is an example of which one of the following?

- A. Client authentication
- B. Four-way handshake
- C. Client profiling
- D. Device validation

**Answer: C**

**Question: 8**

Which one of the following wireless client specifications is helpful in designing the size of an AP cell?

- A. The antenna gain
- B. The receiver sensitivity
- C. The number of spatial streams
- D. The data rates supported

**Answer: B**

### Question: 9

Which of the following Cisco DNA Center utilities enables live packet capture from AP(s) and provides near-real-time information about the client?

- A. Insights
- B. Syslog Server
- C. Path Trace
- D. Intelligent Capture

**Answer: D**

### Question: 10

What is the path taken by location information captured with FastLocate?

- A. Any AP in range of the STA captures data frames, forwards them to the WLC, the WLC extracts the frame RSSI, and forwards it to CMX
- B. Only one AP captures data frames, forward their parameters to the WLC, the WLC forwards them without further processing to CMX
- C. Only one AP captures data frames, bypasses the WLC and forwards their parameters directly to CMX
- D. Any AP in range of the STA captures data frames, bypasses the WLC and forwards their parameters directly to CMX

**Answer: B**
