Latest Version: 6.0

Question: 1

What is the role of the AI Gateway in watsonx Orchestrate?

- A. Block all external AI models
- B. Route requests to third-party AI models
- C. Distribute agent tasks through AI Gateway
- D. Facilitate communication between AI Agents

Answer: B

Question: 2

Which option provides authentication, retries, and observability for MCP?

- A. Governance MCP Gateway
- B. Orchestrate MCP Connect
- C. ContextForge MCP Gateway
- D. Observability MCP Gateway

Answer: C

Question: 3

AI assistants added as collaborator agents support which mode of interaction?

- A. Text-based interactions
- B. Interactive UI widgets only
- C. Voice and text interactions
- D. Text-based and UI widget interactions

Answer: A

Question: 4

Which scenario is most suitable for a watsonx Orchestrate implementation?

- A. Creating a custom ERP system with AI infused business logic
- B. Building a custom machine learning model from scratch
- C. Curating data for trading workflows in financial markets
- D. Automating HR, IT, and finance use cases

Answer: D

Question: 5

How can watsonx Orchestrate be installed without GPUs?

- A. By using small language models
- B. By performing reasoning with Granite 4.0
- C. By disabling inference through configuration
- D. By using AI Gateway to route to external models

Answer: A

Question: 6

Why is the "fallback" strategy often considered a last line of defense for mission-critical agents?

- A. It automatically diverts traffic to a faster, low-latency model if the primary model's response time exceeds a defined threshold.
- B. It performs a consistency check by comparing the outputs of two models and selecting the one with the highest confidence score.
- C. It allows the agent to maintain service availability even if a primary model provider experiences a complete regional outage.
- D. It enforces air-gapped security protocols by routing sensitive queries to a private, on-premises model when the public cloud model fails.

Answer: C

Question: 7

When configuring a new channel connection for an existing agent, what is the first deployment choice that must be made to proceed with configuration?

- A. Enabling Voice Mode or the Home page display for the channel
- B. Selecting the specific environment where the connection will be created
- C. Choosing the appropriate Twilio or Genesys account to authenticate the external service
- D. Selecting which other agents will be connected to collaborate in the unified conversation flow

Answer: B

Question: 8

A developer needs to automate a process that registers new agents dynamically during a deployment pipeline. Which API endpoint enables programmatic registration of agents?

- A. POST /v1/traces/search
- B. GET /v1/orchestrate/tools
- C. GET /catalog/applications
- D. POST /v1/orchestrate/agents

Answer: D

Question: 9

When should an agentic workflow tool be chosen rather than a simple tool?

- A. When the task involves a predictable, complex, and long-running sequence of steps or people.
- B. When a concise, single-step response that only calls a single tool or agent needs to be provided.
- C. When the agent is designed to serve as a collaborator to assist other agents with simple tasks.
- D. When the goal is to define the agent's core style, such as using the Default, ReAct, or Plan-Act styles.

Answer: A

Question: 10

Which statement is true regarding agentic workflows in watsonx Orchestrate?

- A. watsonx Orchestrate uses embedded IBM workflow engines to process tasks.
- B. An LLM model must be available to run agentic workflows.
- C. watsonx Orchestrate runs agentic workflows using embedded hard coded LLMs.
- D. An external workflow engine must be configured to allow users to choose a workflow engine.

Answer: B
