# Latest Version: 6.0

## Question: 1

A customer plans to deploy containerized applications that dynamically scale across compute clusters. Which requirements should influence the architecture analysis?  
(Select TWO)

- A. East-west bandwidth scalability
- B. Rapid workload mobility
- C. Office seating assignments
- D. Printer toner inventory

**Answer: A,B**

## Question: 2

A customer requires secure tenant isolation for workloads hosted on shared infrastructure. Which requirements should the architect evaluate during analysis?  
(Select TWO)

- A. Segmentation scalability
- B. Shared VLAN access across tenants
- C. Centralized security policy control
- D. Independent unmanaged switching

**Answer: A,C**

## Question: 3

A customer wants to reduce the time required to provision new workloads across multiple environments. Which design characteristic BEST supports this objective?

- A. Static Layer 2-only architecture
- B. Manual switch-by-switch configuration
- C. Dedicated unmanaged access switches
- D. Automated orchestration workflows

**Answer: D**

### Question: 4

A customer plans to migrate from a traditional architecture to a modern HPE Aruba Networking EVPN-VXLAN fabric. Which current-environment details should the architect analyze before migration planning?

(Select TWO)

- A. Existing IP addressing strategy
- B. Employee cafeteria menu preferences
- C. Current Layer 2 domain boundaries
- D. Visitor badge printing procedures

**Answer: A,C**

### Question: 5

A customer wants to reduce operational delays caused by manual provisioning and inconsistent configurations between environments. Which architecture characteristic should the architect prioritize?

- A. Independent local administration
- B. Automated orchestration workflows
- C. Manual switch-by-switch deployment
- D. Dedicated Layer 2 rings

**Answer: B**

### Question: 6

A customer requires Layer 2 adjacency between workloads located in different data centers while minimizing operational complexity. Which technology capability BEST supports this requirement?

- A. Single aggregation router deployment
- B. Standalone Layer 2 switches
- C. Static VLAN trunking only
- D. EVPN-VXLAN overlays

**Answer: D**

### Question: 7

During stakeholder interviews, the security team states that all tenant traffic must remain isolated while sharing the same physical infrastructure. Which business requirement does this MOST directly represent?

- A. Multi-tenancy security
- B. Power optimization
- C. Procurement simplification
- D. Desktop standardization

**Answer: A**

### Question: 8

A customer requests a final design review before implementation begins. Which activities should the architect perform during the review?  
(Select TWO)

- A. Review cafeteria staffing requirements
- B. Confirm resiliency and scalability objectives
- C. Validate design alignment with requirements
- D. Audit office parking assignments

**Answer: B,C**

### Question: 9

A customer states that the organization cannot tolerate more than a few minutes of downtime annually for critical business applications hosted in its data center. Which requirement category does this represent?

- A. Cabling requirement
- B. Staffing requirement
- C. Procurement requirement
- D. Availability requirement

**Answer: D**

### Question: 10

A customer wants to standardize operations across multiple geographically distributed data centers while minimizing operational overhead. Which requirement should the architect prioritize?

- A. Independent local-only configurations
- B. Manual switch-by-switch administration
- C. Centralized management capabilities
- D. Dedicated Layer 2 rings per site

**Answer: C**
