Question: 1

Which elements commonly improve a business prompt?
(Choose three)

- A. Clear task objective
- B. Relevant background context
- C. Expected response format
- D. Unrestricted creative assumptions
- E. Success or evaluation criteria

Answer: A,B,C

Question: 2

Why should tool descriptions be clear in an agent system?

- A. They eliminate the need for any monitoring or validation.
- B. They physically increase the model's GPU memory.
- C. They prevent users from entering natural-language prompts.
- D. They help the model choose the correct tool and supply valid inputs.

Answer: D

Question: 3

In an agent loop, what is the purpose of an observation?

- A. It permanently deletes the user's original prompt.
- B. It provides the result of a tool action for the agent's next decision.
- C. It replaces all prompt instructions with random output.
- D. It prevents the model from choosing tools.

Answer: B

Question: 4

What is the primary purpose of few-shot prompting?

- A. To guide the model by showing example inputs and outputs.
- B. To permanently update the model's internal parameters.
- C. To disable the model's ability to generate explanations.
- D. To replace retrieval from private knowledge sources.

Answer: A

Question: 5

A business user asks an LLM to extract invoice number, vendor name, and due date from emails. Which LLM scenario is being used?

- A. Load balancing
- B. Auto Scaling
- C. Information extraction
- D. Database sharding

Answer: C

Question: 6

Which Alibaba Cloud storage service is commonly suitable for storing source documents used by an LLM knowledge application?

- A. OSS
- B. SLB
- C. RAM
- D. CDN

Answer: A

Question: 7

A RAG answer cites a document section that does not actually support the claim. What problem does this indicate?

- A. Successful model fine-tuning.
- B. Poor answer faithfulness to retrieved evidence.
- C. Correct multimodal chart analysis.
- D. Proper load balancing behavior.

Answer: B

Question: 8

Why is human review important when using LLMs for high-impact business content?

- A. LLMs always refuse business-related prompts.
- B. LLMs cannot generate text longer than one sentence.
- C. LLM output can be fluent but inaccurate, incomplete, or unsafe.
- D. LLMs require manual GPU replacement after each response.

Answer: C

Question: 9

A company wants to deploy an LLM application for external customers. Which activity should occur before launch?

- A. Avoid documenting limitations to increase user confidence.
- B. Remove all monitoring to reduce operating cost.
- C. Give the model unrestricted access to all internal systems.
- D. Perform safety, privacy, compliance, and misuse-risk review.

Answer: D

Question: 10

What is the best reason to compare a fine-tuned model against a baseline model?

- A. To prove that evaluation is unnecessary after deployment.
- B. To verify whether fine-tuning actually improves the target task.
- C. To remove all prompts from the application permanently.
- D. To guarantee that the model can access private documents.

Answer: B
