Topic 4, Exam Pool Main

Question: 1

When working on an improvement iteration, which concept helps to ensure that the iteration activities remain appropriate in changing circumstances?

- A. Analysis Paralysis
- B. Direct observation
- C. Minimum viable product
- D. Feedback loop

Answer: D

Question: 2

Which practice has a purpose that includes the management of financially valuable components that can contribute to the delivery of an IT service?

- A. IT asset management
- B. Deployment management
- C. Continual management
- D. Monitoring and event management

Answer: A

Explanation:

An asset is defined as anything that is useful or valuable within a product or service. This value is generally determined financially: how much an asset costs versus how much it saves.

Question: 3

What is MOST LIKELY to be handled as a service request?

- A. An emergency change to apply a security patch
- B. The implementation of a workaround
- C. Providing a virtual server for a development team
- D. Managing an interruption to a service

Answer: C

Explanation:

A service request is a formal request from a user for something to be provided. Service requests are typically less complex and are either approved or denied based on the budget, need, or urgency.

An emergency change to apply a security patch (A) is not a service request because it is an urgent change that needs to be made to address a security vulnerability. The implementation of a workaround (B) is not a service request because it is a temporary solution to a problem. Managing an interruption to a service

(D) is not a service request because it is an incident that needs to be resolved.

Providing a virtual server for a development team (C) is a service request because it is a request for a new service that can be fulfilled by the IT department.

Question: 4

A service will be unavailable for the next two hours for unplanned maintenance. Which practice is MOST LIKELY to be involved in managing this?

- A. Incident management
- B. Service Request management
- C. Change enablement
- D. Service request management

Answer: C

Explanation:

Incident management is typically closely aligned with the service desk, which is the single point of contact for all users communicating with IT. When a service is disrupted or fails to deliver the promised performance during normal service hours, it is essential to restore the service to normal operation as quickly as possible.

Question: 5

Which practice MOST requires staff who demonstrate skills such as empathy and emotional intelligence?

- A. Service request management
- B. Service desk
- C. Problem management
- D. Continual management

Answer: B

Explanation:

“Service desk staff require training and competency across a number of broad technical and business areas. In particular, they need to demonstrate excellent customer service skills such as empathy, incident analysis and prioritization, effective communication, and emotional intelligence.
