Latest Version: 6.1

Question: 1

Which VMware solution supports network automation and micro-segmentation for Kubernetes environments?

Response:

- A. VMware NSX-T
- B. VMware Horizon
- C. VMware Cloud Foundation
- D. VMware Tanzu Mission Control

Answer: A

Question: 2

What does VMware vSAN use to create a shared datastore?

Response:

- A. Network-attached storage
- B. Local storage devices from multiple hosts
- C. Cloud-based storage solutions
- D. Deduplication appliances

Answer: B

Question: 3

What are common network-related metrics monitored in VMware environments?

(Select two.)

Response:

- A. VLAN configuration mismatches
- B. Network packet drops
- C. CPU overcommitment
- D. Network throughput

Answer: B,D

Question: 4

A customer is deploying VMware NSX-T in their hybrid cloud environment to manage network traffic and implement micro-segmentation. They need to ensure compatibility with HPE infrastructure. Which solution should they consider?

Response:

- A. HPE StoreOnce
- B. HPE GreenLake for VMware
- C. HPE ProLiant DX servers
- D. HPE InfoSight

Answer: C

Question: 5

What is the purpose of monitoring datastore latency in a VMware environment?

Response:

- A. To detect network traffic bottlenecks
- B. To identify storage performance issues
- C. To monitor VM snapshot usage
- D. To optimize memory allocation

Answer: B

Question: 6

Which tool is essential for lifecycle management in VMware Cloud Foundation (VCF)?

Response:

- A. VMware vSAN Manager
- B. VMware Cloud Foundation Lifecycle Manager
- C. VMware NSX-T Manager
- D. VMware Tanzu Mission Control

Answer: B

Question: 7

What are benefits of deploying VMware NSX in a Kubernetes environment?
(Select two.)

Response:

- A. Advanced load balancing
- B. Automated VM scaling
- C. Network segmentation
- D. Centralized backup for VMs

Answer: A,C

Question: 8

Which of the following VMware components support hyperconverged solutions?
(Select two.)

Response:

- A. VMware NSX-T
- B. VMware vSAN
- C. VMware Tanzu
- D. VMware Cloud Foundation

Answer: B,D

Question: 9

A customer needs a solution to virtualize their networking layer and improve network security. They require centralized control and micro-segmentation capabilities. Which solution should you recommend?

Response:

- A. VMware vSAN
- B. VMware NSX
- C. VMware Tanzu
- D. VMware Horizon

Answer: B

Question: 10

What is the primary benefit of using VMware-based SDN solutions like NSX?

Response:

- A. Improved storage efficiency
- B. Centralized management of network services
- C. Enhanced disaster recovery capabilities
- D. Integration with physical network devices only

Answer: B
