Question: 1

What is the key difference between Infrastructure as Code (IaC) and traditional infrastructure management?

- A. IaC eliminates the need for security in deployments
- B. IaC automates the provisioning and management of infrastructure through code
- C. IaC requires manual updates for every change
- D. IaC increases infrastructure management complexity

Answer: B

Question: 2

In what way does DevSecOps increase developer efficiency?

- A. Increases the time for rebuilds
- B. Results in secure code but inefficient workflow
- C. Removes duplicate reviews and unnecessary rebuilds
- D. Adds duplicate reviews and necessary rebuilds

Answer: C

Question: 3

A company is looking for a deployment model that allows them to test new features on a small group of users before full deployment. Which model should they use?

- A. Blue/Green deployment
- B. Canary deployment
- C. Rolling deployment
- D. Waterfall deployment

Answer: B

Question: 4

Which two phases of the software development lifecycle does DevSecOps automate with the integration of security?

- A. Development
- B. Review
- C. Deployment
- D. Production
- E. Reliability

Answer: A,C

Question: 5

Which IBM Cloud plug-in analyzes vulnerability and compliance?

- A. Compliance Risk Analyzer
- B. Vulnerabilities and Compliance Analyzer
- C. Compliance Advisor
- D. Code Risk Analyzer

Answer: D

Question: 6

Which IBM tools are commonly used for event management in a DevSecOps pipeline?
(Choose two)

- A. IBM Cloud Pak for Watson AIOps
- B. IBM Cloud Monitoring
- C. Ansible
- D. GitHub

Answer: A,B

Question: 7

Integrating DevSecOps into all stages of the development release cycle results in which of the following?

- A. Quickly identify common vulnerabilities and exposures (CVE)
- B. Decreases the ability to manage newly identified security vulnerabilities
- C. Manages the threat window to exploit vulnerabilities
- D. Separates vulnerability scanning and patching

Answer: A

Question: 8

What is the primary purpose of a delivery pipeline in DevSecOps?

- A. To automate the deployment process
- B. To provide manual testing interfaces
- C. To monitor real-time user activities
- D. To manage team communications

Answer: A

Question: 9

What fundamental change does DevSecOps bring to traditional security practices?

- A. DevSecOps shifts security responsibilities solely to security teams
- B. It integrates security considerations into every phase of the software development and deployment process
- C. It reduces the frequency of security assessments to streamline development
- D. It promotes fully automated security practices without human oversight

Answer: B

Question: 10

Vulnerability Advisor uses which service to monitor vulnerabilities in IBM Cloud?

- A. Portieris
- B. Container Registry
- C. Code Risk Analyzer
- D. Security and Compliance Center

Answer: D
