Question: 1

A marketer wants to know how well her brand awareness campaigns are performing at bringing in new customers. Which calculated metric would provide the most insight on their performance?

Response:

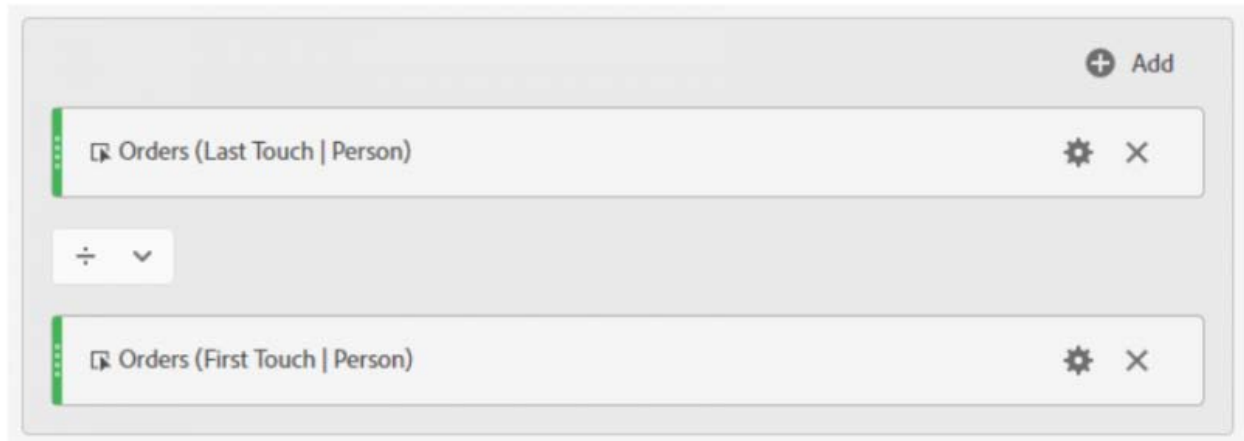

A.

The screenshot shows a calculated metric builder interface. At the top right is a '+ Add' button. Below it is a list of two metrics: 'Orders (Last Touch | Person)' and 'Orders (Participation | Person)'. Between the two metrics is a division operator '÷' and a dropdown arrow 'v'. Each metric entry has a gear icon and a close 'X' icon.

B.

The screenshot shows a calculated metric builder interface. At the top right is a '+ Add' button. Below it is a list of two metrics: 'Orders (First Touch | Person)' and 'Orders (Participation | Person)'. Between the two metrics is a division operator '÷' and a dropdown arrow 'v'. Each metric entry has a gear icon and a close 'X' icon.

C.

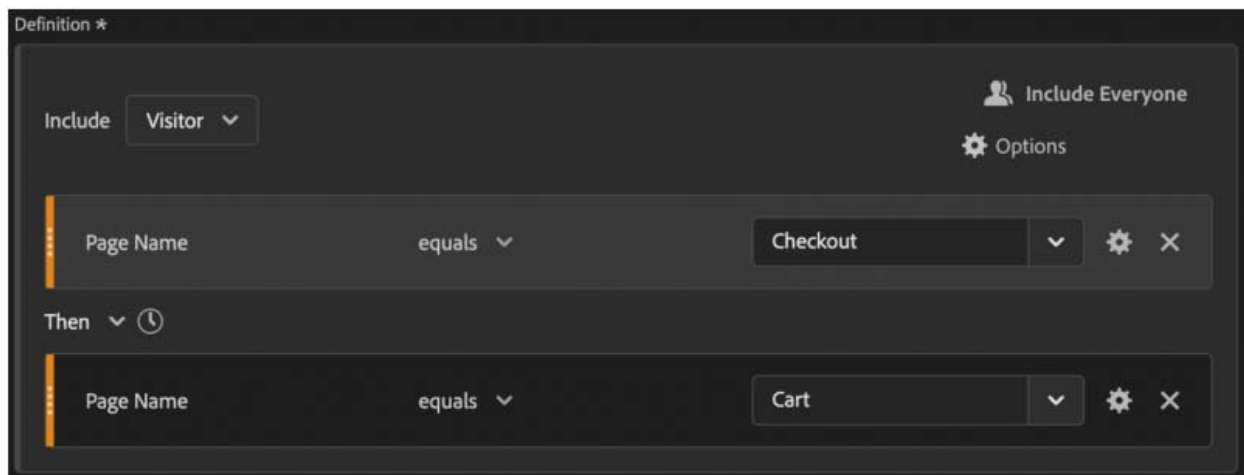

Answer: B

Answer: C

Question: 9

Assume the following scenario: On April 10, a visitor arrives to your site from a link on a social media post, adds 3 items to their cart, then leaves.

On April 14, the same visitor receives an email reminding them about their items in cart. The visitor clicks the link in the email directing them to your site, visits 2 other sites to see if they can find similar products, then leaves your site without purchasing.

On April 16, the same visitor receives an SMS text that 2 of the items in their cart have gone on a sale for 15% off, linking them to their cart. The visitor clicks the link in the SMS text and purchases their cart for a total of \$240.

Which attribution model should you use if you need to equally credit each channel \$80 for the visitor's purchase?
Response:

- A. Participation attribution model with a person lookback window
- B. Linear attribution model with a person lookback window

- C. Linear attribution model with a session lookback window
- D. Last touch attribution model with a session lookback window

Answer: B
