## Question: 1

Attackers often use port evasion techniques to bypass network security devices. Which method is a common example?

Response:

- A. Using port 443 (HTTPS) to carry malicious payloads disguised as encrypted web traffic
- B. Sending attacks only during weekends
- C. Disabling firewall rules to create an open path
- D. Blocking all outgoing traffic on TCP 80

**Answer: A**

## Question: 2

An unauthorized user attempts multiple login attempts across various endpoints in an organization. How can Cortex XDR help mitigate this threat?

Response:

- A. By detecting abnormal login behavior and automatically triggering response actions
- B. By manually reviewing all login logs every week
- C. By encrypting all stored passwords
- D. By blocking all network activity for legitimate users

**Answer: A**

## Question: 3

What differentiates a SIEM from a SOAR platform?

Response:

- A. SIEM collects and analyzes security logs, while SOAR automates incident response workflows
- B. SIEM replaces the need for firewalls
- C. SOAR platforms do not integrate with SIEM solutions
- D. SIEM automatically responds to all security threats

**Answer: A**

### Question: 4

How does DNS Security prevent cyber threats?

Response:

- A. It blocks malicious domains and prevents DNS tunneling attacks
- B. It encrypts all DNS requests automatically
- C. It acts as a firewall replacement
- D. It stores all DNS logs for compliance auditing only

**Answer: A**

### Question: 5

How does a SIEM platform improve security event analysis?

Response:

- A. It aggregates, normalizes, and correlates security events from multiple sources to identify threats
- B. It replaces traditional endpoint detection and response (EDR) solutions
- C. It only stores logs for compliance audits
- D. It automatically prevents malware infections

**Answer: A**

### Question: 6

What is a key benefit of using Cortex Xpanse (ASM)?

Response:

- A. Providing continuous visibility into an organization's exposed assets and potential security risks
- B. Blocking all unauthorized web traffic automatically
- C. Replacing endpoint security solutions
- D. Managing user authentication policies

**Answer: A**

### Question: 7

Which of the following best describes a DDoS botnet?

Response:

- A. A network of infected devices used to overwhelm a target system with excessive traffic
- B. A system that spreads spam emails to trick users into installing malware
- C. A botnet designed to steal financial credentials from infected devices
- D. A botnet used exclusively for cryptocurrency mining

**Answer: A**

### Question: 8

A company experiences a sudden system lockdown, followed by a demand for cryptocurrency payment to regain access to their data

a. What type of attack is occurring?

Response:

- A. Ransomware
- B. DDoS Attack
- C. Spyware Infection
- D. SQL Injection

**Answer: A**

### Question: 9

Your company's HR department reports an email requesting employee tax records, appearing to come from the CEO. However, the email address domain is slightly different from the company's official domain.

What type of phishing attack is this?

Response:

- A. Business Email Compromise (BEC)
- B. Vishing
- C. Clone Phishing
- D. Smishing

**Answer: A**

### Question: 10

Why is compliance management important in cloud security?

Response:

- A. It ensures cloud services adhere to regulatory frameworks like GDPR and HIPAA

- B. It replaces the need for endpoint security
- C. It prevents all unauthorized access
- D. It eliminates the need for threat detection

**Answer: A**
