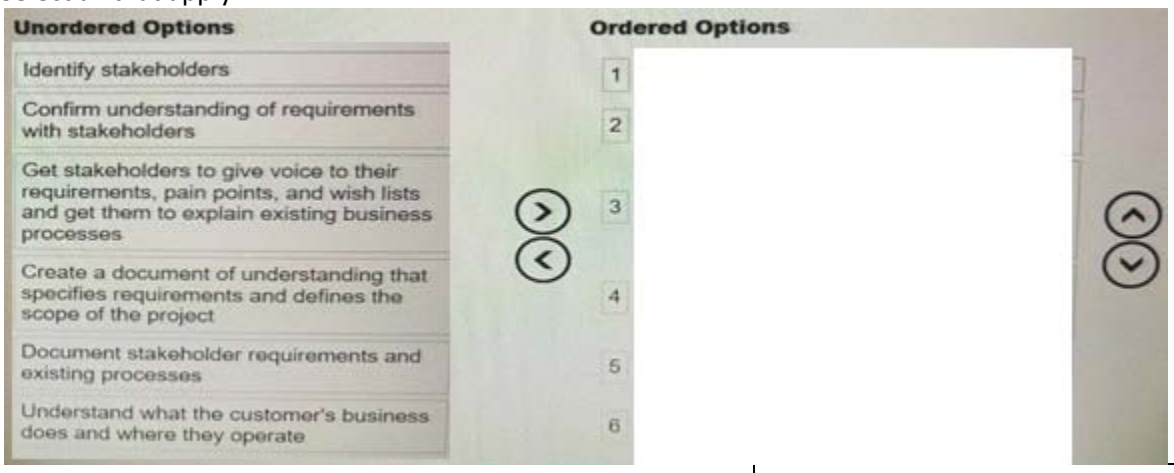
D. $NCHOME/precision/scripts/sh/scripts/ncp_storrn_validate.sh db

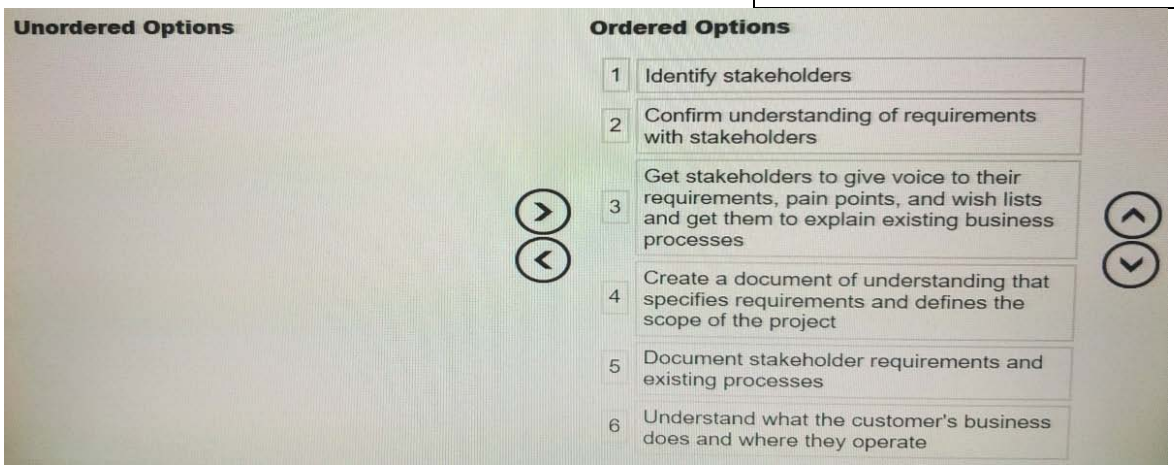
Answer: A

Question: 4

What is the correct sequence of steps for the requirements-gathering phase?
Select all that apply.



Answer:



Question: 5

A custom discovery stitcher creates a temporary table or array called customData using the Record customData; statement. Since implementing the custom stitcher, the amount of available memory on the ITNM server decreases more than normal while discovery is running. What is a potential problem?

A. The customData table was not truncated before running the new discovery
B. The stitcher is missing the delete (customData); statement
C. The stitcher is missing the empty (customData); statement
D. The stitcher is missing the end statement on the last line of the stitcher so the stitcher never finishes

Answer: A
