- B. relay.log
- C. besclient.config
- D. relayselection.log

Answer: D

Question: 5

When a BigFix Client fails to report back to the server, which of the following is the most appropriate first step in troubleshooting the issue?
Response:

- A. Reboot the BigFix Server
- B. Disable the relay selection feature
- C. Check the client service status and logs
- D. Delete the client from the console and reinstall it

Answer: C

Question: 6

Administrators can view the status of all initiated actions and their results under the _____ tab in the BigFix Console.
Response:

- A. Actions
- B. Dashboard
- C. Reporting
- D. Patch Deployment

Answer: A

Question: 7

Which of the following is NOT a requirement for setting up BigFix Server Infrastructure?

Response:

- A. A database server to store endpoint data
- B. A network connection to all endpoint devices
- C. A dedicated server for running the BigFix Console
- D. An additional firewall to manage external communications

Answer: D

Question: 8

How does BigFix Client contribute to the overall BigFix architecture?

Response:

- A. It applies patches to all endpoint devices within the network
- B. It stores endpoint data locally and transmits it to the BigFix Server
- C. It monitors and reports back the compliance status of endpoint devices
- D. It acts as a backup server for endpoint communications

Answer: C

Question: 9

What is the main purpose of the BigFix Relay in the BigFix architecture?

Response:

- A. To provide a graphical user interface for administrators
- B. To facilitate communication between the BigFix Server and endpoint devices
- C. To store endpoint device data
- D. To monitor system health and performance

Answer: B

Question: 10

What is the function of a Group in BigFix when performing administrative tasks?

Response:

- A. To restrict access to the BigFix WebUI for compliance administrators
- B. To assign server resource limitations per user
- C. To organize endpoints based on dynamic or static criteria for targeted actions and reporting

D. To link multiple sites together for data synchronization

Answer: C
