Question: 1

What component is responsible for packaging and compiling software in a BOSH release?

Response:

- A. The agent on the stemcell
- B. The job spec
- C. The compilation VM
- D. The BOSH CLI

Answer: C

Question: 2

Which capabilities best describe how BOSH manages infrastructure resources?

(choose two)

Response:

- A. Automatically recreates failed virtual machines using the Resurrector
- B. Provides a UI for directly editing service broker configurations
- C. Manages persistent disk lifecycles including attach/detach
- D. Uses routing rules to control incoming application traffic

Answer: A,C

Question: 3

What is the primary purpose of BOSH in Cloud Foundry?

Response:

- A. To manage application routing
- B. To handle infrastructure deployment and lifecycle management
- C. To provide a user interface for developers
- D. To manage container orchestration

Answer: B

Question: 4

What configuration element defines the relationships between jobs, instances, and networks in a BOSH deployment?

Response:

- A. CPI YAML
- B. Deployment manifest
- C. Release blob
- D. Resource pool definition

Answer: B

Question: 5

Which command should be used to bind an existing service instance to a deployed Cloud Foundry application?

Response:

- A. cf bind-service
- B. cf connect-service
- C. cf attach-service
- D. cf link-service

Answer: A

Question: 6

What is the purpose of a “network policy” within Cloud Foundry?

Response:

- A. To restrict access to the underlying IaaS network
- B. To restrict the range of public IP addresses that can be accessed by apps
- C. To grant users permission to create private domains
- D. To permit applications to connect via the internal network

Answer: D

Question: 7

Why does BOSH store deployment state information in its database during resilience operations?
Response:

- A. To simplify dashboard integration
- B. To enable continuous blue-green deployments
- C. To track current VM statuses and identify discrepancies
- D. To compress stemcell artifacts

Answer: C

Question: 8

Which of the following are standard buildpacks?
Response:

- A. nginx_buildpack
- B. binary_buildpack
- C. windows_buildpack
- D. nodejs_buildpack

Answer: A,B,D

Question: 9

Why does BOSH validate deployment changes through a diff check before initiating an update?
Response:

- A. To automatically rollback the deployment if a change is found
- B. To ensure updated VMs are scheduled by the CPI first
- C. To compare the current deployment state with the manifest and apply only necessary changes
- D. To prevent deployment when CPU usage is high

Answer: C

Question: 10

BOSH provides monitoring and failure recovery for deployed software?
Response:

- A. True
- B. False

Answer: A
