# Latest Version: 6.0

## Question: 1

What is the role of parallel processing in optimizing data integration performance?

- A. To execute multiple integration jobs simultaneously
- B. To validate data records more efficiently
- C. To reduce the frequency of error logs
- D. To synchronize metadata across applications

**Answer: A**

## Question: 2

Which of the following actions can be taken directly in the workbench during data integration?

- A. Modify dimensional mappings
- B. Drill through to source data
- C. Validate and fix data errors
- D. Configure integration pipelines

**Answer: C**

## Question: 3

What action can you take in the workbench after running a data integration?

- A. Modify the integration pipeline sequence
- B. Review imported data and make corrections
- C. Automate the generation of periodic reports
- D. Configure new drill-through definitions

**Answer: B**

## Question: 4

What type of integration would you use to fetch data from a database in real-time?

- A. File-Based Integration
- B. Direct Integration via JDBC
- C. Pipeline-Based Integration
- D. Metadata Integration

**Answer: B**

### Question: 5

Which of the following is NOT a step in creating a data integration in Oracle Cloud EPM?

- A. Configuring source and target mappings
- B. Testing source connections
- C. Defining metadata drill-through settings
- D. Running Smart Push jobs

**Answer: D**

### Question: 6

Which application category is supported as a target for data integration in Oracle Cloud EPM?

- A. ERP systems only
- B. EPM Planning and Consolidation applications
- C. CRM systems
- D. Custom-developed applications only

**Answer: B**

### Question: 7

Which of the following is NOT a valid target application category in Oracle Cloud EPM?

- A. EPM Planning
- B. Financial Consolidation and Close
- C. CRM Analytics
- D. Profitability and Cost Management

**Answer: C**

### Question: 8

Which parameter ensures a secure connection to a cloud-based source system in Oracle Cloud EPM?

- A. API version
- B. SSL certificate validation
- C. Data map synchronization
- D. Job prioritization rules

**Answer: B**

### Question: 9

What is the best approach to optimize pipeline execution performance?

- A. Use multiple drill-through mappings
- B. Define parallel execution for independent jobs
- C. Enable metadata synchronization for each job
- D. Validate source connections after each run

**Answer: B**

### Question: 10

How does filtering unnecessary data at the source impact data integration performance?

- A. It increases system load
- B. It reduces the volume of data processed, improving performance
- C. It adds complexity to the integration process
- D. It only affects metadata synchronization

**Answer: B**
