# Latest Version: 6.0

## Question: 1

An administrator needs to ensure that only specific users can manage the virtual machines (VM) in a specific VMware vCenter folder.

Which three steps are required to accomplish this? (Choose three.)

- A. Assign the new role to the appropriate users/groups.
- B. Create a new role in vCenter with VM management permissions.
- C. Apply the role to the specific vCenter folder.
- D. Add the identity source to vCenter.
- E. Create a datastore cluster.

**Answer: A, B, C**

## Question: 2

An administrator needs to enable the enhanced capabilities of Storage Operations for vSAN 9.0 in VMware Cloud Foundation (VCF) Operations.

What three prerequisite steps must be completed in order to enable the advanced Diagnostic Troubleshooting, Benchmarking and Optimizing?  
(Choose three.)

- A. No configuration required, Run New Diagnostics is enabled automatically.
- B. Enable and start the vSAN Performance service in the target vCenter.
- C. Configure a vSAN account for the vCenter Integration Instance.
- D. Assign the VCF Operations Service Account administrative rights to vSAN Objects.
- E. Assign the credentials configured in the vCenter Integration instance have access to vSAN objects.
- F. Open port 5989 on each VCF Operations node on which the vSAN adapter exists.

**Answer: B, C, E**

## Question: 3

How does an administrator configure VMware Cloud Foundation (VCF) Operations for logs to send Notifications and Metrics to VCF Operations?

- A. Configure the Integration through VCF Operations for Logs.
- B. Launch the wizard from VCF Operations for Logs.

- C. Launch the wizard from VCF Operations.
- D. Configure the Integrations through VCF Operations.

**Answer: A**

### Question: 4

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within a VMware vSphere Foundation (VVF) environment.

As part of the root cause analysis following a recent critical event, the administrator determined that specific log messages on a host clearly identified the problem.

What should the administrator implement to provide additional data to help troubleshoot in the future?

- A. VCF Operations for logs
- B. VCF Operations Diagnostics
- C. VCF Operations Management Pack for VCF
- D. VCF Automation

**Answer: A**

### Question: 5

An administrator is preparing to deploy VMware vSphere Foundation using the VMware Cloud Foundation (VCF) Installer wizard. During host onboarding, it is discovered that the VMware ESX hosts each have different root passwords.

Which deployment method must be used to continue the installation?

- A. Proceed with the wizard and override host credentials during staging.
- B. Use the deployment wizard and enter credentials per host manually.
- C. Set the password to expire on all ESX hosts.
- D. Use a JSON specification file to define per-host credentials.

**Answer: D**
