Question: 1

How do Copado Extensions typically interact with Job Templates?

- A. Extensions manage pipeline hierarchy
- B. Extensions control Commit Grid behavior
- C. Extensions replace Job Templates
- D. Job Templates can invoke extension logic

Answer: D

Question: 2

What is the relationship between a Copado Function and a Job Template?

- A. Functions replace Job Templates
- B. Job Templates invoke Functions
- C. Job Templates package Functions Images
- D. Functions manage pipeline stages

Answer: B

Question: 3

Where are Copado Extensions typically distributed for reuse?

- A. DevOps Exchange
- B. GitHub Marketplace
- C. Salesforce AppExchange
- D. Copado Pipeline Manager

Answer: A

Question: 4

Which issues can cause Copado Function execution failures?
(Choose three)

- A. Invalid dynamic expressions
- B. Incorrect Commit Grid filters
- C. Missing required input parameters
- D. Missing runtime dependencies

Answer: A,C,D

Question: 5

Why should Functions Images be tested independently before use in production jobs?

- A. To validate pipeline connectivity
- B. To reduce Git conflicts
- C. To enforce governance rules
- D. To verify runtime compatibility and dependencies

Answer: D

Question: 6

Why should dependencies be explicitly defined for job executions?

- A. To avoid runtime failures
- B. To enforce governance policies
- C. To speed up Git merges
- D. To simplify Commit Grid usage

Answer: A

Question: 7

Why should dependencies be explicitly defined for job executions?

- A. To speed up Git merges
- B. To enforce governance policies
- C. To avoid runtime failures
- D. To simplify Commit Grid usage

Answer: C

Question: 8

What should be done if an extension depends on specific runtime libraries?

- A. Require manual installation steps
- B. Disable the Job Engine
- C. Hard-code dependencies in Job Templates
- D. Document and package dependencies appropriately

Answer: D

Question: 9

What enables Job Executions to run independently without interfering with each other?

- A. Shared input parameters
- B. Isolated execution contexts
- C. Common pipeline stages
- D. Commit Grid locks

Answer: B

Question: 10

A Job Execution fails immediately after starting. What should be checked first?

- A. Job Template configuration
- B. Extension publication status
- C. Pipeline activation
- D. Git repository permissions

Answer: A
