Question: 1

A release manager wants to update Git but delay deployment. Which option should be used?

- A. Back Promotion
- B. Promote only
- C. Commit Changes
- D. Promote and Deploy

Answer: B

Question: 2

How does Copado help mitigate deployment errors during the release process?

- A. By automating validation and deployment steps using metadata pipelines
- B. By removing user access to sandboxes
- C. By enabling manual promotion processes only
- D. By enforcing static code analysis before each commit

Answer: A

Question: 3

What does Copado use to identify metadata changes for committing?

- A. Promotion history
- B. Salesforce deployment logs
- C. User story status
- D. Metadata comparison between org and Git

Answer: D

Question: 4

Which action must be completed before promoting changes?

- A. Deployment
- B. Back promotion
- C. Commit
- D. Sandbox refresh

Answer: C

Question: 5

Why does Copado recommend using a structured branching strategy instead of working directly in a single branch?

- A. To remove deployment approvals
- B. To reduce the risk of overwriting changes
- C. To speed up sandbox refreshes
- D. To avoid using Git

Answer: B

Question: 6

Which actions are part of the Promote and Deploy process?
(Choose two)

- A. Detecting changes in the Commit Grid
- B. Back promoting changes
- C. Deploying metadata to the target org
- D. Updating the destination Git branch

Answer: C,D

Question: 7

What are the risks of not performing back promotion in a consistent DevOps pipeline?
(Choose two)

- A. Increased risk of merge conflicts
- B. Inaccurate test environments
- C. Manual commits become mandatory
- D. Reduced performance of Apex classes

Answer: A,B

Question: 8

Copado addresses manual effort and inefficiencies in deployments through which of the following capabilities?

(Choose two)

- A. Automation of CI/CD processes
- B. Visual test automation scripting
- C. Metadata rollback protection
- D. Drag-and-drop Lightning App Builder

Answer: A,C

Question: 9

A developer modifies a Lightning Page and wants to save the change in version control. What should they do?

- A. Commit the change using the Commit Grid
- B. Deploy directly to production
- C. Back promote the branch
- D. Promote the user story

Answer: A

Question: 10

Why is it difficult to apply traditional DevOps tools directly to Salesforce development environments?

- A. Salesforce development is only UI-driven
- B. Salesforce does not support REST APIs
- C. Salesforce does not allow metadata-based development
- D. Salesforce metadata is not file-based and lacks native version control

Answer: B
