Import:
demo:cli-demo $ ls
LICENSE      README.md   notebooks  notebooks.dbc  wheel
demo:cli-demo $ databricks workspace import -l PYTHON -f DBC notebooks.dbc /cli-demo
```

**Question: 3**

Choose the capabilities of Token API with respect to Tokens from the below options

- A. LIST
- B. REVOKE
- C. CREATE
- D. MAX LIFETIME

**Answer: B,C**

Explanation:

# Token Management API

With Token API we can CREATE and REVOKE Tokens.

## Question: 4

Choose the capabilities of Token Management API with respect to Tokens from the below options

- A. MAX LIFETIME
- B. CREATE
- C. LIST
- D. REVOKE

**Answer: A,C,D**

Explanation:

# Token Management API

LIST,REVOKE,MAXTIME are the capabilities of TOKEN MANAGEMENT API .

## Question: 5

which of the following statements regarding tasks in the Admin console are correct ?

- A. You cannot enable token based authentication to allow any user to generate a personal access token from Admin console
- B. You can auto create users from an identity provider in Azure databricks with SSO
- C. You can recover deleted notebooks after purging workspace storage
- D. You cannot edit groups once created in the Admin Console

**Answer: B**

Explanation:

Provision users and groups using SCIM - <https://docs.microsoft.com/en-us/azure/databricks/administration-guide/users-groups/scim/>

## Question: 6

The Databricks REST API supports a maximum of --- requests/second per workspace. Requests that exceed the rate limit will receive a 429 response status code

- A. 100
- B. 50
- C. 1000
- D. 500

E. 30

**Answer: E**

Explanation:

Kindly refer to the documentation for the same :

<https://docs.microsoft.com/en-us/azure/databricks/dev-tools/api/latest/>

### **Question: 7**

Which of the following statements regarding job permissions are correct ?

- A. Although a user with the Can Manage Run permission can start a new run of a job , the job itself will assume the permissions of the job owner , and not the user who issued Run now.
- B. There can be many job owners.
- C. Users and Groups with no permissions for a job can still view job settings and run results
- D. The Is Owner permission is given to the user who created the job and cannot be changed

**Answer: A**

Explanation:

# Job permissions

There are five permission levels for jobs: **No Permissions**, **Can View**, **Can Manage Run**, **Is Owner**, and **Can Manage**. Admins are granted the **Can Manage** permission by default, and they can assign that permission to non-admin users.

The table lists the abilities for each permission.

Ability	No Permissions	Can View	Can Manage Run	Is Owner	Can Manage
View job details and settings	x	x	x	x	x
View results, Spark UI, logs of a job run		x	x	x	x
Run now			x	x	x
Cancel run			x	x	x
Edit job settings				x	x
Modify permissions				x	x
Delete job				x	x
Change owner					x

Please refer to the documentation regarding job access control :  
<https://docs.microsoft.com/en-us/azure/databricks/security/access-control/jobs-acl>

## Question: 8

A user has granted a permission with table access control to create a table but he is not able to access the table, Which of the following privilege is missing ?

- A. UPDATE
- B. INSERT
- C. USAGE
- D. GLOBAL

**Answer: C**

Explanation:

USAGE permission is needed in order to access or have any other privilege.

## Question: 9

VNET peering needs Gateway server,  
Choose one option from below :

- A. Not mandatory with peering, but we can establish connection between two VNETs with VNET-to-VNET network gateway for encrypted traffic. (also site-to-site and ExpressRoute can be configured with Network gateway)
- B. To establish connection between two VNETs with VNET-to-VNET , network gateway is mandatory.

**Answer: A**

Explanation:

A Gateway server is not mandatory with peering, but we can establish connection between two VNETs with VNET-to-VNET network gateway for encrypted traffic. (also site-to-site and ExpressRoute also can be configured with Network gateway)

More information on gateway with VNET-to-VNET peering

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-peering-overview>

## Question: 10

With REST API, what calls can use Query string by appending to the endpoint ?

- A. POST
- B. PUT
- C. LIST
- D. GET

**Answer: D**

Explanation:

While most API calls require that you specify a JSON body, for GET calls you can specify a query string by appending it after ? and surrounding the URL in quotes.

```
curl --netrc 'https://<workspace> /api/2.0/clusters/get?cluster_id=1234-567890-patch123'
```
