Latest Version: 6.0

Question: 1

What is the main objective of runtime monitoring?

Response:

- A. To optimize feature engineering
- B. To detect deviations such as drift or bias after deployment
- C. To retrain models automatically
- D. To replace governance workflows

Answer: B

Question: 2

What is the primary purpose of mapping an organization's structure into watsonx.governance?

Response:

- A. To define model training pipelines
- B. To optimize infrastructure usage
- C. To configure runtime monitoring thresholds
- D. To align AI ownership, accountability, and escalation paths

Answer: D

Question: 3

Which two responsibilities are typically associated with a Risk Manager role?

(Choose two.)

Response:

- A. Writing training code
- B. Managing escalation and remediation processes
- C. Identifying AI-related risks
- D. Optimizing model latency
- E. Designing user interfaces

Answer: B,C

Question: 4

Why are custom dashboards important in watsonx.governance?

Response:

- A. To provide visibility into governance status and risk posture
- B. To configure inference endpoints
- C. To retrain models automatically
- D. To manage dataset versions

Answer: A

Question: 5

Why are guardrails important in AI monitoring?

Response:

- A. They increase training speed
- B. They automate approvals
- C. They define acceptable thresholds for model behavior
- D. They improve data labeling

Answer: C

Question: 6

Which lifecycle practice most directly supports explainability?

Response:

- A. Model training
- B. Capturing asset metadata and lineage
- C. Infrastructure scaling
- D. UI configuration

Answer: B

Question: 7

Which two factors influence how strict AI governance controls should be?

(Choose two.)

Response:

- A. Business impact of the AI system
- B. Regulatory exposure
- C. Programming language
- D. Model file size
- E. Training time

Answer: A,B

Question: 8

Which two lifecycle governance outcomes support regulatory compliance?
(Choose two.)

Response:

- A. Documented approvals
- B. Automated feature selection
- C. Faster retraining
- D. Lower infrastructure cost
- E. Complete asset traceability

Answer: A,E

Question: 9

Why is associating AI assets with an AI use case important?

Response:

- A. To simplify infrastructure management
- B. To reduce training time
- C. To provide governance context for decisions and risk assessment
- D. To automate deployment

Answer: C

Question: 10

Which organizational process ensures issues identified during AI reviews are addressed?

Response:

- A. Model retraining

- B. Issue management and escalation
- C. Data ingestion
- D. Feature engineering

Answer: B
