Latest Version: 6.0

Question: 1

When configuring a new channel connection for an existing agent, what is the first deployment choice that must be made to proceed with configuration?

Response:

- A. Enabling Voice Mode or the Home page display for the channel
- B. Selecting the specific environment where the connection will be created
- C. Choosing the appropriate Twilio or Genesys account to authenticate the external service
- D. Selecting which other agents will be connected to collaborate in the unified conversation flow

Answer: B

Question: 2

Which type of authentication is typically required when integrating watsonx Orchestrate with a secure enterprise application like SAP or Workday?

Response:

- A. No authentication (Public)
- B. OAuth 2.0
- C. ROT13 encoding
- D. Anonymous Guest login

Answer: B

Question: 3

How does watsonx Orchestrate maintain "Context" when a user moves from one sub-agent to another?

Response:

- A. It asks the user to repeat everything they just said
- B. The Orchestration Engine passes session state and variables between agents
- C. It saves the entire conversation to a public website
- D. It doesn't; context is always lost immediately

Answer: B

Question: 4

What is "Agentic Loop" in orchestration?

Response:

- A. A software bug that never ends
- B. The process where an agent can reason, act, observe, and repeat until a goal is met
- C. A physical cable that is plugged into itself
- D. A decorative border around the chat box

Answer: B

Question: 5

When integrating with MCP tools, what is the role of a "Tool Definition"?

Response:

- A. To describe the tool's inputs and capabilities.
- B. To physically repair the server hardware.
- C. To advertise the tool on social media
- D. To count the total number of tools used

Answer: A

Question: 6

Which tool is used to manage "Secrets" like API keys in a deployment?

Response:

- A. A secure vault or secret manager.
- B. A public spreadsheet on the web.
- C. The user's personal email inbox.
- D. A text file on the local desktop

Answer: A

Question: 7

What is the primary benefit of "Multi-agent orchestration" in watsonx Orchestrate?

Response:

- A. Reducing the total number of required API licenses
- B. Allowing a lead agent to delegate specialized tasks to sub-agents
- C. Increasing the physical CPU speed of the orchestration engine
- D. Enabling the agent to work without an internet connection

Answer: B

Question: 8

What are best practices for compliance in watsonx Orchestrate?
Response:

- A. Rate limiting, usage limits, and a DoS response plan
- B. Encrypted data, secure deletion, and data minimization
- C. Comprehensive logging, audit trails, and regular security reviews
- D. Content filtering, sanitized content, and validated input parameters

Answer: C

Question: 9

Which feature allows an engineer to "Roll back" an agent to a previous version?
Response:

- A. Version control management
- B. The "Undo" button in the chat.
- C. Deleting the entire environment
- D. Restarting the physical laptop.

Answer: A

Question: 10

What is a "Multi-agent" gateway used for?
Response:

- A. Managing several specialized bots.
- B. Connecting to only one single LLM.
- C. Increasing the speed of one bot.
- D. Hiding the bots from the users.

Answer: A
